

Solartech Solar Surface Pumps

Product Introduction

Solartech Solar Surface Pump consists of a solar pumping inverter and an Surface pump. Solar pumping inverter drives the pump by converting DC power produced by solar array into AC power and adopts patented dynamic VI maximum power tracking (MPPT) algorithm to adjust output frequency according to solar radiation in real time. It has high reliability and an up to 98% conversion efficiency.

Product Features

Higher Efficiency

- Compatible with submersible pumps, surface pumps, swimming pool pumps and other pumps using three-phase asynchronous motors, easy to install and relocate;
- High reliability due to the uses of intelligent power modules (IPM) in main circuit, up to 98% conversion efficiency of the inverter;
- Patented dynamic VI maximum power tracking (MPPT) algorithm to achieve fast response, good stability and 99% MPPT efficiency;

Convenient

- Easy to install and use without manual debugging;
- Full protections and high reliability;
- Intake and use water without requirements of grid power or water channel;
- Optional advanced functions: encryption for installment payment, analog input control, etc;

Safe

- Good sealing, high protection grade, strong adaptability to wide range of ambient temperature and high humidity, suitable for various harsh outdoor environments;
- Using high standard components, wide input voltage range, built-in boost circuits for low power models, flexible options for solar array configuration;
- Supporting soft start of pump, full motor protections, optional water level switch to prevent overflow and dry running;
- Solar combiner function, which supports multiple DC input strings and each string is equipped with anti-reverse circuit;
- Intelligent recognition of input voltage, automatic operation without manual debugging of voltage parameters;
